

AEBrowse.OpcClient.Initialize

AEBrowse.OpcClient.Initialize  
AeObjects

AEBrowse.OpcClient.Terminate

AEBrowse.OpcClient.GetApplication

```
graph LR; A[AEBrowse.OpcClient.Initialize] --> D[AEBrowse.OpcClient.GetApplication]; B[AEBrowse.OpcClient.Initialize AeObjects] --> D; C[AEBrowse.OpcClient.Terminate] --> D;
```

The diagram illustrates a dependency or relationship between four methods. On the left, three methods are listed in separate boxes: 'AEBrowse.OpcClient.Initialize', 'AEBrowse.OpcClient.Initialize AeObjects', and 'AEBrowse.OpcClient.Terminate'. On the right, a single method 'AEBrowse.OpcClient.GetApplication' is shown in a shaded box. Three blue arrows point from each of the three methods on the left to the 'AEBrowse.OpcClient.GetApplication' method on the right, indicating that these three methods are associated with or depend on the 'GetApplication' method.
