

MySession::handleClientName  
Changed

MySession::handleConnected

MySession::handleDisconnected

MySession::getHandle

```
graph LR; A[MySession::handleClientName Changed] --> D[MySession::getHandle]; B[MySession::handleConnected] --> D; C[MySession::handleDisconnected] --> D;
```

The diagram illustrates three separate method calls on the left, each represented by a white box with a black border. These calls are: 'MySession::handleClientName Changed', 'MySession::handleConnected', and 'MySession::handleDisconnected'. Blue arrows originate from the right side of each of these three boxes and converge on a single gray box on the right labeled 'MySession::getHandle'. This visualizes that all three different events or states trigger the same 'getHandle' method.
