

BISDemo.DataPointElement.  
ExecuteCommand

BISDemo.DataPointElement.  
Simulate

BISDemo.DataPointElement.  
ValueChanged

```
graph LR; A[BISDemo.DataPointElement.ExecuteCommand] --> C[BISDemo.DataPointElement.ValueChanged]; B[BISDemo.DataPointElement.Simulate] --> C;
```

The diagram illustrates a dependency or event subscription. Two methods, 'ExecuteCommand' and 'Simulate', both belong to the 'BISDemo.DataPointElement' class. Both methods have arrows pointing to a 'ValueChanged' event, also belonging to the 'BISDemo.DataPointElement' class. The 'ValueChanged' event box is shaded gray, while the method boxes are white with black borders.
