

DataPointElement::execute
Command

DataPointElement::simulate

DataPointElement::valueChanged

```
graph LR; A[DataPointElement::executeCommand] --> C[DataPointElement::valueChanged]; B[DataPointElement::simulate] --> C;
```

The diagram illustrates a relationship between two methods and a common event. On the left, there are two white rectangular boxes. The top box contains the text 'DataPointElement::executeCommand' and the bottom box contains 'DataPointElement::simulate'. On the right, there is a gray rectangular box containing the text 'DataPointElement::valueChanged'. Two blue arrows originate from the right side of the left boxes and point towards the left side of the gray box, indicating that both methods trigger the valueChanged event.
