

SOCmnString::hashDJB2

```
graph LR; A[SOCmnString::hashDJB2] --> B[SOCmnString::format]; B --> C[SOCmnString::setData]; B --> B;
```

The diagram illustrates a sequence of three operations. The first operation, 'SOCmnString::hashDJB2', is represented by a grey rectangular box. A blue arrow points from this box to the second operation, 'SOCmnString::format', which is in a white rectangular box. From the 'format' box, another blue arrow points to the third operation, 'SOCmnString::setData', also in a white rectangular box. Additionally, a curved blue arrow originates from the top of the 'format' box and points back to itself, indicating a self-loop or a repeated operation.

SOCmnString::format

SOCmnString::setData
