

initializeServer

SOXpSStart

requestThreadMain

```
graph LR; A[initializeServer] --> C[requestThreadMain]; B[SOXpSStart] --> C;
```

The diagram illustrates a control flow where two separate functions, 'initializeServer' and 'SOXpSStart', both lead to the execution of 'requestThreadMain'. 'initializeServer' is positioned above 'SOXpSStart', and both have blue arrows pointing to the 'requestThreadMain' box on the right. The 'requestThreadMain' box is shaded gray, while the others are white with black borders.
