

SoftingOPCToolboxServer
::Application::setAeServerState

SoftingOPCToolboxServer
::Application::setDaServerState

OTSSetServerState

```
graph LR; A[SoftingOPCToolboxServer::Application::setAeServerState] --> C[OTSSetServerState]; B[SoftingOPCToolboxServer::Application::setDaServerState] --> C;
```

The diagram illustrates a mapping from two distinct function calls to a single target. On the left, two white rectangular boxes with black borders contain the function names: 'SoftingOPCToolboxServer::Application::setAeServerState' (top) and 'SoftingOPCToolboxServer::Application::setDaServerState' (bottom). On the right, a gray rectangular box with a black border contains the target name 'OTSSetServerState'. Two blue arrows originate from the right side of the left boxes and point towards the left side of the gray box, indicating that both functions map to the same target.
